World Horticultural Trade and U.S. Export Opportunities

U.S. Wine Exports Continue to Climb 15 Consecutive Years of Growth

The combination of robust foreign demand, market promotion efforts, recovering international economies, and reports of favorable health effects associated with moderate wine consumption have all fueled U.S. wine exports since 1985. In calendar year 1999, U.S. wine exports (including cider, fermented beverages, and must) reached \$540.9 million, up 2 percent from 1998. The United Kingdom, Canada, and Japan were the top markets. The largest gains were South Korea at \$2.7 million (up 128 percent) and China at \$2 million (up 247 percent).

Export Summary

U.S. exports of horticultural products to all countries in December totaled \$860 million, an increase of 2 percent from the same month a year earlier. Eight of the 15 product categories registered value increases. Categories with the most significant increases in December were fresh citrus fruit (up \$9.8 million or 22 percent) and fresh non-citrus fruit (up \$7.9 million or 9 percent). The category with the most significant decrease was tree nuts (down \$13.7 million or 12 percent). For FY 2000 to date (October-December), the total value of U.S. horticultural exports was \$2.7 billion, roughly equal to FY 1999 during the same period.

Tree Nut Situation Updates

This report updates the tree nut situation for selected countries published in the November 1999 issue of the World Horticultural Trade & U.S. Export Opportunities circular.

Almonds

Almond production in selected countries in 1999/2000 is forecast at a record 487,050 tons, less than 1 percent below the previous estimate and 63 percent above last year's production. Lower estimates of the 1999/2000 Spanish almond crop accounted for the slight decrease from the November estimate. The forecast for the 1999/2000 U.S. crop remains at a record 376,500 tons, 60 percent above last year's crop, due to good weather, increasing acreage, and the crop's cyclical nature. Almond exports from selected countries in 1999/2000 are forecast at 264,800 tons, 20 percent above last year and 1 percent above the previous estimate, due to a slightly higher export forecast for the United States. U.S. exports from August 1999 through January 2000 (according to trade sources) totaled 134,540 tons, 31 percent above last season's exports during the same period. Sales to date to the European Union, the largest U.S. market, are up 21 percent from last year. U.S. 1999/2000 ending almond stocks are forecast to decline slightly to 110,000 tons, due to the increase in export volume. These large reserves are due primarily to the Almond Board of California's (ABC) effort to stabilize declining almond prices by reserving 22 percent of this year's crop. Export prices for U.S. almonds are down 33 percent compared to the same period last year.

Walnuts

Walnut production in selected countries in 1999/2000 is estimated at 663,500, 10 percent above last year's production and slightly below the November forecast, due to a slightly lower production estimate for Chile. The 1999/2000 U.S. walnut crop is estimated at a record 254,000 tons, 23 percent above the 1998/99 harvest. Walnut exports from selected countries in 1999/2000 are forecast at 182,470, 6 percent below the previous estimate, due to a slightly lower forecast for the United States. U.S. exports from August 1999 through December 1999 (according to the U.S. Bureau of Census) totaled 63,712 tons, a slight increase above the previous year's shipments during the same time period. Although sales to the European Union, the largest U.S. market, are down 16 percent for 1999/2000 compared to this same period for 1998/99, sales to Japan and North America (Canada and Mexico) are up 50 and 77 percent, respectively.

Hazelnuts

The 1999/2000 hazelnut production estimate for selected countries has been decreased to 724,500 tons, 6 percent below the November forecast. This is due primarily to production decreases for Spain and Turkey. U.S. production remains at 34,500 tons, 145 percent above last season, due to the crop's alternate bearing cycle. Total hazelnut exports from reporting countries in 1999/2000 are forecast at 459,000 tons, 1 percent below the November estimate, but 12 percent above 1998/99 exports. The decrease is due to lower export forecasts for Spain and the United States. The U.S. export forecast was decreased based on significantly fewer shipments to date compared with the volume for the same time period for prior years. Although sales to the European Union, the largest U.S. market, are down 51 percent for 1999/2000 compared to this same period for 1998/99, sales to Hong Kong are up 92 percent from the same period last year. The export forecast for Turkey remains unchanged at 400,000 tons, 15 percent above last year's volume.

(The FAS Attache Report search engine contains detailed reports on Tree Nut Competition or Market Intelligence for 16 countries, including Spain, France, Chile, and Turkey. For information on production and trade, contact Lisa Anderson at 202-720-5028. For information on marketing, contact Ingrid Mohn at 202-720-5330.)

^{5/} The 1999/2000 production forecast comes from NASS

F= Forecast.

Situation and Outlook for Macadamias

Macadamia prices continue to fall as a result of world oversupply. Total world supplies are forecast at a record 106,010 tons for 1999/2000, up 5 percent from last year. Forecasted acreage and yield increases in Australia and South Africa, the world's first and third largest producers, respectively, are expected to increase world supplies to 116,547 tons in 2000/2001. The lingering effects of the economic crisis in Asia, the largest regional market for U.S. exports, continue to hold down Asian demand for U.S. macadamia nuts. Stiff competition from other macadamia producing countries is also weakening demand for U.S. exports. Exports from selected countries are forecast to increase 8 percent to a record 41,912 tons. Australia remains the world's largest exporter of macadamias, accounting for more than 40 percent of total world exports. The United States, the world's second largest producer, is the largest single export market for Australia, South Africa, Guatemala, Brazil, and Costa Rica.

United States

U.S. macadamia nut production in 1999/2000 is forecast at 24,040 tons, 8 percent below the 1998/99 crop, due to drought-like conditions throughout most of 1999. Output for 2000/2001 is expected to remain at the same level. Exports in 1999/2000 are forecast to decrease 12 percent from last year to 3,000 tons, due to decreased demand from Asia, the largest market for U.S. macadamia exports, and increased competition from imports. The United States exports mostly prepared or preserved macadamias. With the exception of Hong Kong, sales to the Asian market are down significantly compared to this same period last year. While sales to date for Hong Kong are up 83 percent, sales to Japan, Korea, and Taiwan are down an average of 45 percent. Japan is the largest single country market, purchasing over 50 percent of U.S. macadamia exports. With no strong recovery expected in Asian demand, macadamia exports for 2000/2001 are forecast to remain the same as 1999/2000.

U.S. imports in 1999/2000 are forecast to increase 8 percent to 20,000 tons, due to increased production in other countries and low Asian demand. Other macadamia producers grow solely for export, primarily to the United States, the world's largest macadamia consumer. Rising U.S. consumer income and spending has been a factor in soaking up some of the excess in world supplies. Additionally, U.S. food processors report difficulties in procuring a steady 12-month supply from Hawaii. The majority of macadamia imports are bulk and industrial product intended for processing.

The Hawaii Agricultural Statistics Service (HASS) reports that in shell grower prices averaged \$.67/lb, a 3 percent increase from 1998/99. Although prices received by some growers were lower than last season, the overall average was influenced in part by higher, long-term contract prices.

Australia

Australia is the world's largest macadamia producer. Output in 1999/2000 is forecast at 34,000 tons, the same as the 1998/99 record crop, due to the crop's alternate bearing cycle. Macadamia production for 2000/2001 is forecast to increase to 39,100 tons, up 15 percent from 1999/2000, due to increasing acreage, better yields, and more trees coming into production. The Australian macadamia nut industry is highly export oriented, exporting over 50 percent of production. Exports in 1999/2000 are forecast at 18,100 tons, only a slight increase from 1998/99. In 1999/2000, exports are forecast to increase 17 percent to 21,100 tons, due to the larger crop. The United States is still the major single country market for Australian macadamia exports. However, the Asian market, which Japan and Hong Kong dominate, accounted for about 43 percent of total exports in 1998/99. The Australian Macadamia Society (AMS) estimates that grower prices fell about 12 percent from 1998 to 1999 to A\$2.20, reflecting the world oversupply situation.

South Africa

The 1999/2000 harvest is expected to increase 18 percent from last year to 8,000 tons, due to increased acreage and trees coming into full production. This is expected to continue for the next few years, as more than 50 percent of planted trees will come into bearing age. Output for 2000/2001 is forecast to increase another 19 percent to 9,500 tons. If current trends continue, macadamia production could reach 20,000 tons by 2005. Exports in 1999/2000 are also expected to rise, up 14 percent from 1998/99 to 7,650 tons. In 2000/2001, exports are forecast at 9,090, an increase of 19 percent from 1999/2000. South Africa exports over 80 percent of total production, with the United States and Europe being the biggest importers, accounting for 59 percent and 29 percent of total 1998/99 exports, respectively. With current high world supply levels, increasing worldwide production, and modest demand in their two main markets, South African grower prices have fallen about 20 percent from 1997/98 to 1998/99.

Kenya

Macadamia output for 1999/2000 is forecast at 6,000 tons, down 8 percent from last year, due mainly to premature nut harvest and bad weather. Production for 2000/2001 is forecast to increase slightly due to improved agronomic practices and increased plantings. Exports are forecast to increase to 6,481 tons in 1999/2000, up 19 percent from last season, due to the increasing export oriented nature of the industry. Japan and the United States are the primary export destinations, accounting for 58 percent and 32 percent of total exports, respectively.

Guatemala

In 1999/2000, macadamia nut production is forecast at 4,000 tons, an increase of 43 percent from last year. Output for 2000/2001 is to increase to 7,200, an increase of 80 percent. This upward trend is mainly due to new trees coming into full production. Guatemala exports nearly all of its macadamia production, with the United States and the European Union receiving 80 percent and 11 percent of 1998/99 shipments, respectively. World oversupply and the lingering effects of the Asian crisis precipitated a substantial drop in macadamia prices; FOB sale prices have dropped 37 percent to USD\$2.20/lb between 1998 and 1999.

Brazil

In 1999/2000, Brazil's output of macadamias is expected to rise 2 percent to 2,000 tons, as a result of more trees coming into production. This trend is expected to continue, with production expected to rise an additional 10 percent to 2,200 tons in 2000/2001. Exports are forecast to increase 3 percent in 1999/2000 and a further 10 percent in 2000/2001, reflecting the increased competitiveness of the Real as a result of last year's currency devaluation. The United States and the European Union are Brazil's top two export markets, receiving 50 percent and 12 percent of macadamia shipments in 1998/99, respectively.

Costa Rica

Macadamia production for 1999/2000 is forecast at 2,000 tons, the same as last year. Output for 2000/2001 is expected to remain the same. In response to several years of low nut prices, producers are switching to other crops. Consolidation in the industry has left only one large macadamia producer in the country. Exports totaled 1,681 tons in 1998/99 and are expected to increase 13 percent in 1999/2000, comprising 95 percent of total production. Costa Rica's main export market is the United States, which accounted for 77 percent of total exports in 1998/99.

(The FAS Attache Report search engine contains reports on the macadamia industry for 6 countries, including Australia, Guatemala, Kenya, and South Africa. For information on production and trade, contact Lisa Anderson at 202 720-5028).

World Wine Situation

Overall, the production and export forecast for 1999 is favorable for the selected Northern Hemisphere countries (France, Italy, Germany, Portugal, and the United States). Wine production in 1999 for these selected EU producers is forecast at 170.2 million hectoliters, up 9 percent from the previous year. Spain's production, however, is expected to fall 3 percent due to adverse weather conditions.

Northern Hemisphere

European Union

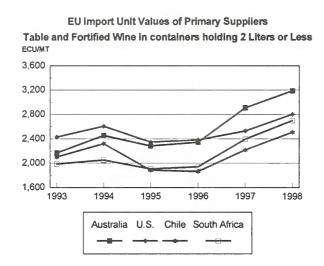

The European Union (EU) is the world's largest producer and consumer of wine, led by France, Italy, and Spain (see table below). The EU has 45 percent of the world's vineyard area and produces and consumes 60 percent of the world's wine. European production, winegrape acreage, and per capita wine consumption have been slowly declining over the last decade, although total consumption has increased in certain countries, such as Spain, Italy, and France.

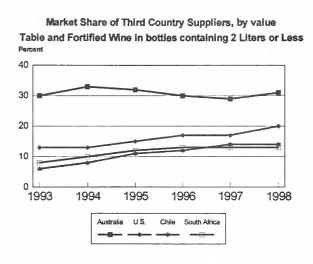

The production and acreage declines are due in part to new EU policy reforms. The reforms to the Common Organization of the Wine Market will be implemented on August 1, 2000 to help the EU wine industry adapt to new market conditions. The proposed budget will increase from 661.0 million ECU (roughly the same in U.S. dollars) in EU budget year 1999/2000 to 1.3 billion ECU per year, including roughly 44 million ECU in export subsidies per year. Major changes include replacement of current distillations with a more flexible system that will address such "crises" as overproduction; modification of the EU system of planting and uprooting vines; and EU reimbursements to wine growers for losses resulting from reconversion, uprooting or planting. In addition to these funds, individual member states also provide funds for export assistance (see individual country sections below for more details).

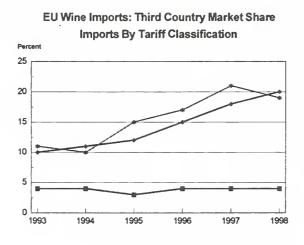

In 1998, the EU renewed the U.S.-EU Wine Accords for five years. Under these Accords, the United States obtained temporary derogations from EU restrictions on certain enological practices and from certain cumbersome certification procedures. Meanwhile, U.S.-EU wine negotiations continue but major differences remain. The United States would like to achieve mutual recognition of enological practices approved in either country while the EU prefers to use a positive list of practices. Other negotiation topics include the protection of EU semigeneric/geographic terms, traditional EU expressions (i.e., reserve and amber), labeling, certification, and tariffs.

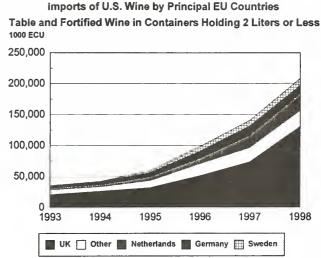

The EU is the largest export market for U.S. wine, and the United States faces steep competition in the EU from new world wine producers, such as Australia, Chile, and South Africa (see tables

below). From 1993-98, the EU's largest import tariff category was bottled table and fortified wine. Australia was the EU's top supplier from third countries of this category over this period, followed by the United States, Chile, and South Africa. Australia's market share by value hovered around 30 percent over this period. In comparison, the United States market share rose steadily to 20 percent over this period, and Chile's and South Africa's shares each rose steadily to about 12 percent.

France

France accounts for 12 percent of world vineyard area, 20 percent of world wine production, and 16 percent of world wine consumption. France is forecast to surpass Italy in 1999 as the world's largest wine producer. French production in 1999 is estimated at 61.7 million hectoliters (hl), an increase

of 17 percent over 1998, due to an increase in yield across all regions.

French wine exports are forecast to increase 2 percent to 16.7 million hl in 1999. Germany, the United Kingdom, Belgium/Luxembourg, and the United States were France's top markets in 1998. The financial crisis and large stocks slowed exports to Southeast Asia, however, exports to Japan increased 88 percent to 1.03 million hl. Italy and Spain remain France's largest suppliers. About three-fourths of France's wine imports are bulk white table wines.

The French government subsidizes the wine sector through the ONIVINS and SOPEXA. ONIVINS administers EU subsidies in France. In 1998, ONIVINS paid approximately \$5.1 million in export subsidies. SOPEXA, the French national market promotion agency, markets French food and wine domestically and internationally through a combination of government and industry funds. Its 1998 budget was approximately \$10 million.

Italy

Italian wine production is estimated at 57.4 million hl in 1999, a 2-percent increase over 1998, due to overall favorable weather conditions. Italian vine area has continuously declined in the past two decades due to the vine uprooting program under the EU legislation and was reinforced by the new Common Agricultural Policy which prohibits new planting but allows for limited re-planting aimed at the production of higher quality wines.

Italian wine exports increased 9 percent to 15.2 million hl in 1998, and are forecast to remain stable in 1999. Germany, France, the United States, and the United Kingdom are the top export markets. Italian imports increased 34 percent to 863,000 hl in 1998 mainly due to expanded imports of inexpensive French and Spanish wines.

Italy provides export promotion assistance funds. The Italian Trade Commission, an agency of Ministry of Foreign Trade, provides the only wine specific program, and allocated approximately \$380,000 in 1998. Also, the Ministry of Agriculture funds food and beverage promotions, of which approximately \$2.5 million was spent on wine in 1999.

Spain

Adverse weather conditions have decreased Spain's 1999 wine production 3 percent to 32.5 million hl. Dryness affected certain key producing areas and frost reduced crops in Rioja and Navarra, while Ribera del Duero and other leading areas had bumper crops.

Despite increased prices, exports increased 12 percent to a record 11.2 million hl in 1998. About 75 percent went to other EU countries, 7 percent went to the United States, and 5 percent to Switzerland. Imports rebounded to 922.8 million hl, mostly from the EU, Chile, Argentina, and the United States.

The Spanish Foreign Trade Institute is responsible for diversified government-funded foreign market promotion programs. In 1997, Spain spent approximately \$29.2 million in EU export subsidies.

Germany

The 1999 harvest provided a bumper crop of approximately 13 million hl of wine must in 1999, a 22-percent increase, due to perfect growing conditions. This should replenish stocks and market shares that were lost due to low 1995-97 harvests.

In 1998, Germany imported 12.2 million hl and exported 2.5 million hl. Also in 1998, imports exceeded production by 1.4 million hl, as a result of the low 1995-97 harvests. The majority of imports came from Italy, France, and Spain. The U.S. has a very small market share in volume but a significant share in value terms. The U.S. exported \$35 million in wine to Germany in 1998, most of which was red wine. The trend for U.S. exports is increasing as Germans increasingly prefer high quality wines.

The German Wine Institute markets wines internationally through contributions paid by the industry and proceeds from its own business. Its annual budget totals approximately \$11.5 million.

Portugal

Portugal's 1999/2000 wine production is estimated at 5.5 million hl, a 60-percent increase over the exceptionally poor 1998/99 output. A recent moderate increase in vineyard area will increase output potential.

Portugal is traditionally a net exporter. However, due to the low 1998/99 production, 1999 wine exports are estimated at 1.8 million hl, a 50 percent drop over 1998, and imports are estimated at 2.1 million hl. Due to the recent higher production, exports are expected to rise to 2 million hl and imports are expected to decline slightly to 2 million hl in 2000.

United States

U.S. wine production is estimated at 20.7 million hl for 1999, up 1 percent from the previous year. La Nina helped create an exceptional vintage with its long, cool growing season which concentrated flavors in the grapes. In February 2000, the California Department of Food and Agriculture estimated the 1999 crush at 2.9 million tons, up slightly from a year earlier, but experts think it will fall short.

In 1999, exports of U.S. wine and wine products (including cider, fermented beverages, and must) reached a new record at 2.8 million hl, up 4 percent (\$540.9 million, up 2 percent) from 1998. Bottled grape wine accounted for 78 percent of the total by value. Robust foreign demand, market promotion efforts, recovering international economies, and reports of favorable health effects

associated with moderate wine consumption all fueled U.S. wine exports.

The export base for U.S. wine and wine products is expanding. In 1999, the top export markets were the United Kingdom, Canada, and Japan. Japan slipped back into third place, due to large stocks going into 1999. The most impressive gains were South Korea at \$2.7 million (up 128 percent), China at \$2 million (up 247 percent), and Finland at \$3.3 million (up 14 percent). Finland is one market where there is renewed interest in U.S. wines. For the first time, U.S. wine industry representatives plan to use Market Access Program funds to participate in the ViiniExpo Trade Show scheduled in Helsinki in March 2000.

(The FAS Attache Report search engine contains reports on the wine industry for more than 13 countries, including France, Italy, and Spain. For information on production and trade, contact Shari Kosco at 202-720-9792. For information on marketing contact Yvette Wedderburn Bomersheim at 202-720-0911.)

World Table Grape Situation and Outlook

U.S. table grape production for 1999 is estimated at 680,389 tons, 16 percent above 1998 levels, and exports increased 15 percent to 238,609 tons in 1999, based on higher production and the opening of new markets. Canada, Hong Kong, and Mexico were the top markets for U.S. grape exports in 1999. Table grape production and export forecasts for the Southern Hemisphere in 2000 are mixed.

Southern Hemisphere

Argentina

Production in 2000 (harvested December 1999 through May 2000) is forecast at 20,000 tons, down 5 percent from 1999. In 1999, Argentina exported 15,900 tons, down 11 percent from 1998, and exports are expected to decline another 12 percent to 14,000 tons in 2000.

No significant change in export patterns is expected. Belgium was the main buyer, followed by the Netherlands, Brazil, and Canada. Imports are very small and are mainly supplied by Brazil and Chile.

Chile

Good climatic conditions in most production areas in MY2000 are expected to significantly increase output by approximately 10 percent to 895,000 tons. Thompson Seedless, Flame Seedless, and Ribier account for the bulk of production. Planting has stabilized and new planting, primarily with new varieties that better reflect market demands, is now only replacing aging vineyards.

Exports are also forecast to rise almost 10 percent to 520,000 tons in 2000. Chile's exports to Asia grew in 1999, reflecting the development of a new market in South Korea. Imports, which are minimal, dropped 50 percent to 60 tons in 1999 from 1998 levels. Imports are expected to decline again in 2000. The United States accounts for almost all of Chile's imports.

South Africa

In 2000, production is expected to rise slightly to 225,000 tons, a 1-percent increase over 1999. Exports increased 21 percent to 180,000 tons in 1999 but are expected to decline 3 percent to 175,000 tons in 2000 due to adverse weather. The grapes, which are normally exported beginning in November, suffered damage from heavy rains in December 1999. The EU is the main buyer of South African grapes (primarily the United Kingdom, Belgium, and the Netherlands), followed by

the United States.

Northern Hemisphere

It is too early to make reliable forecasts for the northern hemisphere for 2000 but data for this hemisphere has been revised since the November issue (see table below).

United States

California's table grape production in 1999 is estimated at 680,389 tons, 16 percent above 1998 levels. California accounts for 90 percent of the U.S. table grape production. U.S. table grape exports in 1999 increased 15 percent to 238,609 tons. Canada, Hong Kong, and Mexico were the top export markets. Most notably, exports to the Philippines increased 123 percent to 14,264 tons.

The United States and Australia have reached an agreement which will soon allow the United States to begin shipping table grapes after implementing certain protocols, including fumigation. On January 14, 2000, Australia released its final import risk assessment (IRA) on California table grapes and determined that California table grapes will meet Australia's phytosanitary requirements if imported under one of two specified fumigation options. Shipments of California table grapes should begin this season if there are no appeals or if any appeals that are made are not upheld by the Appeal Panel. The U.S. industry estimates that Australia will import between one and one and a half million boxes per year, placing Australia in the top five markets for California grapes. The estimated value for those shipments is between \$12 million and \$19 million.

The United States is a net table grape importer. Imports for 1999 are forecast at 409,879 tons, a 1-percent increase. Chile and Mexico are the main suppliers (see tables below).

(The FAS Attache Report search engine contains reports on the deciduous fruit industries for more than 20 countries, including Chile, Mexico, and Japan. For information on production and trade, contact Shari Kosco at 202-720-9792. For information on marketing contact Yvette Wedderburn Bomersheim at 202-720-0911.)

World Apple Situation

Apple production in selected countries in marketing year 1999/2000 continues to increase and is forecast at a record 47.6 million tons. The increase mainly reflects larger apple crops in China and in some major producing countries of the European Union, such as France and Italy. Selected countries apple exports in 1999/2000 are forecast at 4.5 million tons, practically unchanged from 1998/99 shipments. U.S. apple exports in 1999/2000, on the other hand, are forecast at 550,000 tons, down 14 percent from the previous forecast and 18 percent below last season's shipments. A smaller Washington state apple crop, higher export prices, and ample exportable supplies in the EU are hampering U.S. apple shipments this season.

NORTHERN HEMISPHERE

Apple production continues to increase in 1999/2000

Total apple production in selected Northern Hemisphere countries in 1999/2000 is forecast at 43.3 million metric tons, up 3 percent from the previous year's bumper output. The increase mainly reflects larger apple crops in *China* and in some major producing countries of the *European Union* (*EU*), such as *France* and *Italy*. On the other hand, *U.S.* apple production in 1999/2000 is forecast 8 percent below the record 1998/99 crop.

China's apple production in 1999/2000 is forecast at a record 20.8 million tons, almost half the Northern Hemisphere total apple crop. China has become a major producer of deciduous fruits in recent years. Economic liberalization policies, high domestic prices during the 1980's and early 1990's, and the lack of reliable information on the world supply-demand situation, prompted a wide campaign to replace some production of traditional crops with massive planting of deciduous fruit trees. Apples are the main fruit produced, accounting for 35 percent of an estimated 55 million tons of deciduous fruit output in 1999/2000. Moreover, Chinese apple production has increased more than 700 percent in the last 20 years and now accounts for more than 30 percent of world apple production.

The total *EU* apple crop in 1999/2000 is forecast at 9.1 million tons, the largest ever. Italy, accounting for a quarter of the total EU 1999/2000 apple production forecast, has become the largest EU producer, surpassing France for the second consecutive year. Italian apple production has become more and more concentrated in the Trentino-Alto region, which now produces nearly 60 percent of the Italian apple crop. Red and Golden Delicious varieties account for more than 60

percent of total Italian apple production.

The *U.S.* apple production forecast for marketing year 1999/2000 (July-June) has been revised up slightly to 4.8 million metric tons, but still 8 percent below last season's record output. Apple production in Washington state, the largest U.S. apple producer, is forecast at 2.3 million tons, down almost a quarter from last season's record crop of 3.0 million tons. The smaller 1999/2000 Washington state apple crop, combined with ample supplies of good quality fruit have improved U.S. apple prices from the very low levels registered during the 1998/99 season. In 1999/2000, Washington state will likely account for less than half the total U.S. apple crop, compared to more than a 55 percent share in 1998/99.

Apple exports in 1999/2000 will likely remain unchanged from the previous season's shipments

Apple exports from selected countries in the Northern Hemisphere in 1999/2000 are now forecast at 3.1 million tons, unchanged from last season's shipments. Lower exportable supplies in the *United States* will likely offset improved export prospects for the *EU*. The *EU*, mainly *France* and *Italy*, and the *United States* account for about 60 percent of Northern Hemisphere countries' apple exports.

The *U.S.* 1999/2000 export forecast has been decreased 14 percent to 550,000 tons, down 18 percent from last season's shipments. A much smaller Washington state apple crop, higher export prices, and ample exportable supplies in the EU are hampering U.S. apple shipments this season, mainly from the Pacific Northwest.

SOUTHERN HEMISPHERE

Southern Hemisphere apple crop smaller in 1999/2000

Apple production in selected countries of the Southern Hemisphere in 1999/2000 is forecast at 4.3 million tons, down 6 percent from last season's output. Smaller crops are expected in the principal southern producing countries of *Chile* and *Argentina*.

Argentine apple production in 1999/2000 is forecast at 1.0 million tons, 22 percent below the 1998/99 bumper crop, due to adverse climatic conditions. Hail storms and late frosts in November and early December in Rio Negro and Neuquen, especially around Rio Colorado, have hampered Argentina's overall apple output this season. Argentina's apple production is located in Rio Negro (75 percent), Neuquen (15 percent), and Mendoza (10 percent).

Chilean apple production in 1999/2000 is forecast at 929,200 tons, 8 percent below the 1998/99 record output, mainly due to unfavorable weather during the spring. Chilean apple producers continue to diversify their orchards by planting new and more popular varieties such as Fuji, Gala,

Jonathan, and Braeburn. However, Red apple varieties still account for about 70 percent of total output and are mainly for the European and Middle East markets. The principal green variety, Granny Smith, is used both for the fresh export (mainly Europe and the United States) as well as for concentrated apple juice production.

Southern Hemisphere apple exports to decrease in 1999/2000

Apple exports from selected countries in the Southern Hemisphere in 1999/2000 are forecast at 1.4 million tons, 3 percent below last season's shipments. The two largest apple exporters in the Southern Hemisphere, *Chile* and *New Zealand*, are expected to decrease exports.

Chile's apple exports in 1999/2000 are forecast at 510,000 tons, down 5 percent from last season. A smaller apple crop will likely hamper Chile's apple exports in 1999/2000. Red apple varieties account for about two thirds of Chile's apple sales overseas, although the share of sweet varieties, such as Fuji, is increasing.

New Zealand's apple exports in 1999/2000 are forecast at 306,000 tons, down 3 percent from shipments in 1998/99, due mainly to lower exportable supplies. Braeburn represents about 60 percent of total New Zealand apple production and 40 percent of its total apple exports. The United States, Canada, and the EU are New Zealand's major apple customers.

^{1/} Data for Northern Hemisphere countries are for a July/June marketing year, except for Mexico and France which are August/July. In the Southern Hemisphere the marketing year begins on January 1 of the second year indicated, except for Chile, where the year starts on February 1 of the second year indicated, and New Zealand, where the year starts in October 1 of the first year indicated. For Austria, processing apples are not included in production.

^{2/} The U.S. 1998/99 "withdrawal" estimate captures an estimated 8 percent of the U.S. apple crop that was not utilized. The 8 percent mainly reflects fruit left on the trees because of low prices. The United States does not have a withdrawal program.

^{3/} U.S. import/export forecasts are based on trends during recent years, volume traded in the period July/December 1999, and trade contacts.

Kiwifruit Situation For Selected Countries

Selected country kiwifruit production for 1999/2000 is forecast to increase12 percent to 891,180 tons. Production in the Northern Hemisphere is up 19 percent due principally to a forecast 32 percent and 26 percent increase in Italian and Greek output respectively. Southern Hemisphere production is forecast to be up by 2 percent. Selected country kiwifruit exports in 1999/2000 are forecast to increase by 15 percent to 616,800 tons. Italy is expected to account for two thirds of the increase in exports. Increased exports from Greece and Chile are forecast to account for the rest of this increase. Exports from New Zealand, the worlds second largest producer and exporter, are forecast to decline by 4 percent to total 183,500 tons due to lower production. United States kiwifruit production in 1999/2000 is forecast to be down 32 percent, to 22,680 tons. The industry estimates a commercial packout of 20,000 tons. United States exports in 1999/2000 may account for 12 percent of the packout compared to 25 percent of the packout exported last year. United States kiwifruit imports in 1999/2000 are expected to be 6 percent greater than last year as foreign supplies will fill the gap in demand left be the short U.S. crop.

European Union

The European Union (EU) is the world's most important kiwifruit growing region accounting for 54 percent of total world production. Italy is the largest producer, accounting for 69 percent of EU production. The EU greatly facilitated conversion of crop land to kiwifruit in the 1980s through widespread subsidies. Although most subsidies have reportedly been eliminated, their impact continues. Production in 1999/2000, for the 5 major EU producing countries is 479,800 tons up 25 percent from the previous year. EU exports in 1999/2000 are forecast at 319,700 tons up 29 percent from last year. All Northern Hemisphere countries with the exception of Italy and Greece, are net importers of kiwifruit. If this year's forecasts hold true, Greek production of 55,000 tons and exports of 25,000 tons will be the second largest of the decade. French production and exports, forecast at 72,000 and 24,000 tons respectively, will also be strong.

Italian kiwifruit production in 1999/2000 marketing year is estimated at 330,000 tons representing a 32 percent increase from last year's small harvest. Italy's exports for 1999/2000 are forecast at 260,000 tons, up 31 percent from last year's low of 199,000 tons. Over 70 percent of Italy's exports are destined for other EU countries, mainly Germany which accounts for 26 percent of total exports. Due to this year's large crop and low prices, Italy is expected to significantly expand shipments to Eastern Europe and Asia.

United States

Kiwifruit production in 1999/2000 is forecast at 22,680 tons, down 32 percent from last year's crop. Industry sources indicate a commercial packout of 20,000 tons, off 8,600 tons from last year. Due to the small crop, domestic shipments are down 10 percent and exports are 66 percent from last year's level.

U.S. exports of kiwifruit in 1998/1999 reached 7,115 tons, up 1,419 tons from the previous year's level. World demand was so strong last year that New Zealand sold out early and United States shipments to Asian markets were substantially up. In fact, the United States even supplied New Zealand with 235 tons of kiwifruit. Exports to Canada however declined by 25 percent to total only 3,015 tons. Nevertheless, Canada is the major U.S. kiwifruit market, and last year accounted for 42 percent of total U.S. exports. This year exports are forecast at 2,400 tons. Most of the shipments will split up fairly evenly between Canada and Mexico, with a small amount moving to Korea.

The California Kiwifruit Commission (CKC) has recognized the importance of export markets. For over three years, CKC has committed more than eighty-five percent of its Market Access Program Funds in continuing to develop and maintain the Canadian, Mexican and Korean markets. In-store promotions, trade relation activities, and trade shows have been used to address low awareness and increasing competition in Canada and Korea.

The California Kiwifruit Commission (CKC) has been working in Canada to overcome competition from Italian, Greek, and French kiwifruit exports. Last year, promotional activities included consumer promotions, trade shows and trade related activities.

New Zealand

Due to severe September frosts and heavy December rains New Zealand's production in 2000 is forecast at 202,000 tons, down 4 percent from last year's crop of 210,000 tons. Last year's crop was lower than normal due to poor flowering and many vines being converted to the Zespri GOLD variety. Production of this variety is forecast to grow from 340 tons last year to over 5,000 tons in 1999/2000. The 1999 selling program for Zespri GOLD in the UK, Japan, and Australia was extended to the United States and Taiwan for the first time and trials were conducted in Spain and Sweden in preparation for the campaign in Europe this year.

New Zealand's 1999/2000 exports are forecast at 183,500 tons, down 9 percent from the previous year due to the reduced production.

For further information on production, supply and distribution, and trade contact Robert Knapp, Horticultural and Tropical Products Division, (202) 720-4620. For information on U.S. marketing opportunities, contact Kelly Strzelecki, 690-1314.

World Trade Situation and Policy Updates

USDA Issues Melon Fruit Fly Quarantine for Parts of Los Angeles County

The U.S. Department of Agriculture is amending its regulations to quarantine a part of Los Angeles County, Calif., for the melon fruit fly. APHIS, along with state and county agencies in California, have begun an intensive survey and eradication program in the infested area. As a result of this rule, the movement of certain items to destinations outside the quarantine area will be regulated. Regulated items include specific fruits, vegetables, and plants. The melon fruit fly, Bactrocera cucurbitae (Coquillett), is a destructive pest of fruits and vegetables, including melons, mangos, peppers, squash, cucumbers, beans, oranges, and peaches. The pest can damage the seedlings and young plants of squash, melons, and cucumbers, and reduce the yield and quality of the fruits and vegetables. Heavy infestations can result in the complete loss of these crops. The interim rule is scheduled to be published in the Feb. 22 Federal Register and becomes effective upon publication.

Organic Updates

Philippine Organic Market

Currently, the Philippine organic sector is relatively small. Industry estimates indicate the overall value at about Pesos 250 million (\$6.15 million) of which about 60 percent consists of imported processed products. Domestic production is growing at 10 to 20 percent annually, although less than one percent of the agricultural acreage in the Philippines is farmed organically, with most concentrated outside metropolitan Manila. Major domestic output includes fresh and processed fruits and vegetables, herbs and spices, rice, sugar, soybeans, honey, livestock and poultry, dairy and fertilizer. Indications are that demand for organic products will outpace local production.

Presently, organics is a niche market supported by higher-income, health-conscious Filipinos who have traveled overseas, and expatriates concerned with food safety, the environment and personal health. Major market constraints include lack of awareness of organics among mainstream Filipino shoppers, limited availability, and prices which average 20 to 30 percent higher than for conventional products. The major force behind the development of the Philippine organic industry is the Organic Producers Trade Association. NGOs and interested parties from Europe are also helping expand the sector. The Philippine Department of Trade provides support in fostering exports, and in November 1999 sponsored an international organics conference in Tagaytay City which drew participants from around the world.

Best prospects for U.S. exporters are processed foods, but opportunities also exist for inputs such as seed, feed, technology and equipment to support the growing domestic production sector. Organic regulations are being developed, but there are currently no special labeling or import requirements for organic products. U.S. exporters interested in the Philippine organic market should work closely with importers and customers and be prepared to commit resources for promotion and advertising.

Mexico's Growing Organic Sector

Organic production in Mexico is on the upswing. From 1996 to 1998, land area devoted to organics increased 140 percent from 23,000 hectares (56,800 acres) to 55,000 hectares (135,900 acres). Organic methods are used in many areas of the country, yielding a diversity of crops including coffee, tomatoes, hot peppers, cucumbers, onions, garlic, peas, melons, squash, eggplant, apples, sesame, beans, chickpeas, blue corn, peanuts, vanilla, pineapples, herbs, avocados, and more. About 95 percent of Mexico's 28,000 organic producers farm small areas and together account for 89 percent of the organic acreage. The rest are large-scale commercial growers who benefit from economies of scale and a more developed infrastructure. Most of Mexico's organic output is destined for the export market. Exports are valued at US\$70 million annually. U.S. and European certifiers are active in certifying crops for export, whereas their Mexican counterparts certify products for local consumption.

The demand for imported organic products in Mexico currently is quite limited due to low consumer awareness, high prices, undeveloped distribution channels and strong domestic production.

For more news on organics, see HTP's monthly newsletter "Organic Perspectives," available at the HTP home page: www.fas.usda.gov/htp/organics/organics.html The newsletter contains reports on organics from around the world gleaned from attache reports, trips made by HTP's organics staff, and other sources. The newsletter also covers items of interest about the U.S. national organic program and the domestic organic industry. A list of upcoming conferences, trade shows and other events is included in every issue.

Export News and Opportunities

USDA Increases Operational GSM-102 Credit Guarantees to Mexico

On February 8, USDA increased the operational amount of GSM-102 credit guarantees available for sales to Mexico from \$500 million to \$1 billion. The total FY 2000 authorization for Mexico remains unchanged at \$1.5 billion, with \$500 million still unallocated. The previous program announcements pertinent to Mexico's GSM-102 program are PR 0509-99 and PR 0488-99.

Exporters may apply for credit guarantees on a first-come, first-served basis to cover sales of any of the commodities specified in the GSM list of commodities published in FAS program announcement PR 0003-00, issued January 5, 2000, or as superseded. The list of eligible commodities will apply to all individual country and regional announcements unless otherwise stated in the announcements. The following horticultural products are eligible under the export credit guarantee programs for FY 2000: dried fruit; fresh fruit; frozen fruit; canned fruit; 100-percent fruit juices; fruit and vegetable concentrates, pastes, pulps and purees; honey; hops or hops extract; beer; tree nuts; fresh vegetables; canned vegetables; dried vegetables; wine; and brandy. From time to time, this list may be amended as additional commodities become eligible. The allocation does not assign dollar amounts to any of the commodities specified in the GSM list of commodities, providing buyers and sellers maximum flexibility in arranging the size of their transactions within the scope of the overall allocation.

The GSM-102 program makes available credit guarantees for sales of U.S. agricultural commodities overseas. USDA does not provide financing, but guarantees payments due from foreign banks. USDA typically guarantees 98 percent of the principal and a portion of the interest. The GSM-102 program covers credit terms from 90 days to 3 years.

Under the program, once a firm sale exists, the qualified U.S. exporter applies for a payment guarantee before the date of export. The U.S. exporter pays a fee calculated on the dollar amount guaranteed, based on a schedule of rates applicable to different lengths of credit periods. The Commodity Credit Corporation (CCC)-approved foreign bank issues a dollar-denominated, irrevocable letter of credit in favor of the U.S. exporter, ordinarily advised or confirmed by the financial institution in the United States agreeing to extend credit to the foreign bank. The U.S. exporter may negotiate an arrangement to be paid as exports occur by assigning the U.S. financial institution the right to proceeds that may become payable under the guarantee, and later presenting required documents to that financial institution. Such documents normally include a copy of the export report.

If a foreign bank fails to make any payment as agreed, the exporter or the assignee may file a claim with USDA for the amounts due and covered by the guarantee. USDA will pay the U.S. bank and will take on the responsibility of collecting the overdue amount from the foreign bank.

The table on page 45 presents the FY 2000 GSM-102 for which USDA has authorized credit guarantees for sales of U.S. horticultural products as of February 11, 2000. Additional information about the GSM-102 program, regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity may be accessed on the Internet at:

http://www.fas.usda.gov/excredits/exp-cred-guar.html

Supplier Credit Guarantee Program: No Activity Since Last Publication

The SCGP is unique because it covers short-term financing extended directly by U.S. exporters to foreign buyers and requires that the importers sign a promissory note in case of default on the CCC-backed payment guarantee. The SCGP emphasizes high-value and value-added products, but may include commodities or products that also have been programmed under the GSM-102 program.

The table on page 46 presents the FY 2000 Supplier Credit Guarantee Program for which USDA has authorized credit guarantees for sales of U.S. horticultural products as of February 17, 2000. Additional information about the SCGP, regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity may be accessed on the Internet at:

http://www.fas.usda.gov/excredits/scgp.html

The General Sales Manager will consider requests to establish a SCGP and/or GSM Program for a country or region or amend an authorized program to include horticultural commodities and products which are currently not eligible.

The SCGP encourages exports to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without CCC guarantees. Under the SCGP, CCC guarantees a portion of payments due from importers under short-term financing (up to 180 days) that exporters have extended directly to the importers for the purchase of U.S. agricultural commodities and products. These direct credits must be secured by promissory notes signed by the importers. CCC does not provide financing but guarantees payment due from the importer.

Program announcements which can be accessed on the Internet provide information on specific country and commodity allocations, length of credit periods, the required form of promissory note, and other program information and requirements.

(For further information on the SCGP or GSM-102 Program for horticultural commodities, contact Yvette Wedderburn Bomersheim, (202) 720-0911 or Elizabeth Mello (202) 720-9903).

Think outside the borders.

Ever felt like you were trapped inside a cookie cutter, with all your competitors chasing the same customers?

Well, **96 percent of the world lives outside our borders** and, with a little effort and a little help, you can reach them.

USDA's Ag Export Services can put your message on line and in newsletters, translated into dozens of languages and in front of buyers in 75 countries for \$15. And that's just for starters.

To learn how you can sell your food or fiber products outside our borders, contact USDA's Ag Export Services.

Phone: 202-690-3576 • Fax: 202-690-0193 Email: startagexporting@fas.usda.gov http://www.fas.usda.gov/startagexporting.html

UNITED STATES DEPARTMENT OF AGRICULTURE FOREIGN AGRICULTURAL SERVICE 1400 INDEPENDENCE AVENUE, SW WASHINGTON, DC 20250-1004

For questions concerning your subscription or change of address, PRINT OR TYPE the new address, including ZIP code and return this sheet to:

U.S. DEPARTMENT OF COMMERCE TECHNOLOGY ADMINISTRATION NATIONAL TECHNICAL INFORMATION SERVICE SPRINGFIELD, VA 22161

For questions or concerns on the data included in this publication, contact us at the address shown above.

Summaries and selected tables from many Foreign Agricultural Service world market and trade reports are available electronically. The reports include U.S. Export Sales (available electronically after 8:30 a.m. on release day); Grain: World Markets and Trade; Oilseeds: World Markets and Trade; Cotton: World Markets and Trade; Tobacco: World Markets and Trade; World Agricultural Production; the early release version of

World Horticultural Products and U.S. Export Opportunities; and Tropical Products: World Markets and Trade (all available electronically after 3:00 p.m. Washington DC time on release day) as well as Sugar: World Markets and Trade; Livestock and Poultry: World Markets and Trade; Dairy: World Markets and Trade, and U.S. Planting Seed Trade (available within a week after release.)

You can read the reports on the FAS home page (http://www.fas.usda.gov). The reports remain "current" until the succeeding issue is available. Older issues are available in the archives section of the home page. We also make selected cover articles and graphics available from these publications, in a separate section of the site. Reports are also available from the Economic Bulletin Board at Stat-USA, on the same schedule. For more information, you may contact Stat-USA at (202) 482-1986 (Monday-Friday, 8:30-5:30 p.m. Washington, DC time.)

For more information on the FAS home page, contact Glenn Kaup, tel. (202) 720-3329; fax. (202) 720-3229; or via e-mail kaup@fas.usda.gov

The U.S. Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call (202) 720-5964 (voice or TDD). USDA is an equal opportunity provider and employer."
